

Our Biodiversity approach

OUR PRINCIPLES

As part of Viva Energy's Business Principles, we commit to contribute to sustainable development. This requires integrating economic, environmental and social considerations into business decision-making.

We recognise that maintaining biodiversity is an integral part of conserving the global environment and is fundamental to human survival. We recognise the intrinsic value of biodiversity and take measures to protect it in all of the areas in which we operate.

Viva Energy undertakes efforts to conserve biodiversity and maintain the ecological integrity of the areas in which we operate. This approach is met through the design, monitoring and implementation of various measures that minimise impacts on ecosystems and habitats in our operational areas.

OUR APPROACH

- We look for ways to reduce the environmental impact of our operations, products and services.
- We monitor and assess our activities to ensure alignment with legal obligations and promptly address any gaps or areas for improvement.
- We avoid, minimise, and mitigate any negative impacts on biodiversity by conducting environmental impact assessments prior to development projects. These assessments detail any potential impacts on biodiversity present in the relevant and surrounding areas, as well as the appropriate mitigations that have been applied.

- We invest resources into biodiversity activities that support conservation within our areas of operation to improve biodiversity management practices and identify new opportunities for conservation and sustainability.

OUR APPROACH APPLIES TO

All sites in where we operate across the three business units: Convenience & Mobility, Commercial & Industrial and Energy & Infrastructure.

We recognise that biodiversity spans beyond the limits of our operations and concerns, hence we continue to engage with stakeholders, including local communities, indigenous groups and conservation organisations, to understand their concerns and interests.

Reporting

Our monitoring and reporting program is an integral component of ensuring we are supporting biodiversity and ongoing improvement of our practices.

Responsibility

All Viva Energy employees.

We engage with contractors, suppliers, customers, business partners and the communities in which we operate with a view to seeking alignment with our approach to biodiversity.

Document review

A key part of how Viva Energy conducts business is continuous improvement. Viva Energy is committed to periodically reviewing, assessing and measuring this document and activities to ensure effectiveness and relevancy.

The document cannot be amended without review by the Board.
